This book is devoted to the PSI method. Its appearance was a reaction to the unsatisfactory situation in applications of optimization methods in engineering. After comprehensive testing of the PSI method in various fields of machine engineering it has become obvious that this method substantially surpasses all other available techniques in many respects. It has now become known that the PSI method is successfully used not only in machine design, at which it was initially aimed, but also in polymer chemistry, pharmacy, nuclear energy, biology, geophysics, and many other fields of human activity. To all appearances this method has become so popular for its potential of taking into account the specific features of applied optimization better than other methods, being, at the same time, comparatively simple and friendly, and because, unlike traditional optimization methods which are intended only for searching for optimal solutions, the PSI method is also aimed at correctly formulating engineering optimization problems. One well-known aircraft designer once said, "To solve an optimization problem in engineering means, first of all, to be able to state this problem properly". In this sense the PSI method has no competitors. Although this method has been presented in Russia in numerous papers and books, Western readers have had the opportunity to familiarize themselves with this method only recently (Ozernoy 1988; Lieberman 1991; Stadler and Dauer 1992; Dyer, Fishburn, Steuer, Wallenius, and Zionts 1992; Steuer and Sun 1995, etc.).

From reader reviews:

Shawn Hunter:

Have you spare time for the day? What do you do when you have considerably more or little spare time? Sure, you can choose the suitable activity intended for spend your time. Any person spent all their spare time to take a stroll, shopping, or went to the particular Mall. How about open or perhaps read a book allowed Multicriteria Design: Optimization and Identification (Applied Optimization)? Maybe it is for being best activity for you. You recognize beside you can spend your time with the favorite's book, you can more intelligent than before. Do you agree with it has the opinion or you have other opinion?

Steven Zakrzewski:

Typically the book Multicriteria Design: Optimization and Identification (Applied Optimization) will bring you to definitely the new experience of reading some sort of book. The author style to describe the idea is very unique. Should you try to find new book to study, this book very suited to you. The book Multicriteria Design: Optimization and Identification (Applied Optimization) is much recommended to you to see. You can also get the e-book from your official web site, so you can more readily to read the book.

Rodolfo Odum:

People live in this new day time of lifestyle always aim to and must have the free time or they will get wide range of stress from both day to day life and work. So , whenever we ask do people have time, we will say absolutely yes. People is human not only a robot. Then we consult again, what kind of activity are there when the spare time coming to anyone of course your answer will probably unlimited right. Then do you try this one, reading guides. It can be your alternative in spending your spare time, typically the book you have read is Multicriteria Design: Optimization and Identification (Applied Optimization).

Larry Turner:

Your reading 6th sense will not betray you actually, why because this Multicriteria Design: Optimization and Identification (Applied Optimization) publication written by well-known writer who really knows well how to make book that may be understand by anyone who have read the book. Written within good manner for you, still dripping wet every ideas and composing skill only for eliminate your hunger then you still question Multicriteria Design: Optimization and Identification (Applied Optimization) as good book not just by the cover but also by the content. This is one e-book that can break don't evaluate book by its protect, so do you still needing one more sixth sense to pick this!?! Oh come on your looking at sixth sense already told you so why you have to listening to a different sixth sense.
