Gravitation and Relativity: International Series in Natural Philosophy M. G. Bowler

Gravitation and Relativity generalizes Isaac Newton's theory of gravitation using the elementary tools of Albert Einstein's special relativity. Topics covered include gravitational waves, martian electrodynamics, relativistic gravitational fields and gravitational forces, the distortion of reference frames, and the precession of the perihelion of Mercury. Black holes and the geometry of spacetime also receive consideration. This book is comprised of 10 chapters; the first of which briefly reviews special relativity, with the emphasis on the Lorentz covariance of the equations of physics. This topic is then followed by a short discussion on accelerations in the framework of special relativity. Two problems related to the gravitational deflection of light and how to detect a gravitational acceleration by observations within a freely falling laboratory are discussed in this book. The chapters that follow focus on the Eötvös-Dicke experiments that established the identity of inertial and gravitational mass; the equations of electrodynamics and electrostatics; force laws and equations of motion; and the precession of the perihelion of Mercury. The reader is also introduced to the nature of gravitational radiation; its generation and detection; and the relation between the metric tensor and gravitational potentials. The book concludes with a chapter on black holes and how they may manifest themselves to the astronomer.

This monograph will appeal not only to professional physicists but also to undergraduates in physics who want to know a great deal about gravitation and relativity.

From reader reviews:

Charles Branch:

What do you think of book? It is just for students since they're still students or the idea for all people in the world, what the best subject for that? Only you can be answered for that problem above. Every person has distinct personality and hobby for every other. Don't to be pushed someone or something that they don't want do that. You must know how great in addition to important the book Gravitation and Relativity: International Series in Natural Philosophy. All type of book would you see on many methods. You can look for the internet options or other social media.

Peggy Gillman:

That guide can make you to feel relax. That book Gravitation and Relativity: International Series in Natural Philosophy was multi-colored and of course has pictures around. As we know that book Gravitation and Relativity: International Series in Natural Philosophy has many kinds or style. Start from kids until teens. For example Naruto or Private eye Conan you can read and think that you are the character on there. So , not at all of book are usually make you bored, any it makes you feel happy, fun and chill out. Try to choose the best book for you and try to like reading that will.

Donna Dalessio:

As a pupil exactly feel bored for you to reading. If their teacher expected them to go to the library or make summary for some publication, they are complained. Just little students that has reading's soul or real their pastime. They just do what the trainer want, like asked to go to the library. They go to right now there but nothing reading critically. Any students feel that reading is not important, boring in addition to can't see colorful pictures on there. Yeah, it is to become complicated. Book is very important for you. As we know that on this period, many ways to get whatever we really wish for. Likewise word says, many ways to reach Chinese's country. Therefore , this Gravitation and Relativity: International Series in Natural Philosophy can make you sense more interested to read.

James Cummings:

Reading a publication make you to get more knowledge from the jawhorse. You can take knowledge and information coming from a book. Book is composed or printed or descriptive from each source that filled update of news. Within this modern era like today, many ways to get information are available for you actually. From media social including newspaper, magazines, science e-book, encyclopedia, reference book, book and comic. You can add your understanding by that book. Are you hip to spend your spare time to spread out your book? Or just searching for the Gravitation and Relativity: International Series in Natural Philosophy when you required it?
