David Marr, Shimon Ullman, Tomaso A. Poggio

Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press) David Marr, Shimon Ullman, Tomaso A. Poggio

David Marr's posthumously published *Vision* (1982) influenced a generation of brain and cognitive scientists, inspiring many to enter the field. In *Vision*, Marr describes a general framework for understanding visual perception and touches on broader questions about how the brain and its functions can be studied and understood. Researchers from a range of brain and cognitive sciences have long valued Marr's creativity, intellectual power, and ability to integrate insights and data from neuroscience, psychology, and computation. This MIT Press edition makes Marr's influential work available to a new generation of students and scientists. In Marr's framework, the process of vision constructs a set of representations, starting from a description of the input image and culminating with a description of three-dimensional objects in the surrounding environment. A central theme, and one that has had far-reaching influence in both neuroscience and cognitive science, is the notion of different levels of analysis -- in Marr's framework, the computational level, the algorithmic level, and the hardware implementation level. Now, thirty years later, the main problems that occupied Marr remain fundamental open problems in the study of perception. *Vision* provides inspiration for the continuing efforts to integrate knowledge from cognition and computation to understand vision and the brain.

From reader reviews:

Alicia Hendrickson:

The book Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press) give you a sense of feeling enjoy for your spare time. You can utilize to make your capable a lot more increase. Book can for being your best friend when you getting anxiety or having big problem together with your subject. If you can make reading a book Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press) to get your habit, you can get more advantages, like add your own capable, increase your knowledge about a few or all subjects. You can know everything if you like start and read a publication Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press). Kinds of book are a lot of. It means that, science publication or encyclopedia or others. So , how do you think about this guide?

Mary Parker:

What do you ponder on book? It is just for students as they are still students or it for all people in the world, the actual best subject for that? Merely you can be answered for that question above. Every person has several personality and hobby for every single other. Don't to be pushed someone or something that they don't want do that. You must know how great as well as important the book Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press). All type of book are you able to see on many sources. You can look for the internet sources or other social media.

Heather Stewart:

The actual book Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press) will bring that you the new experience of reading the book. The author style to describe the idea is very unique. When you try to find new book to learn, this book very appropriate to you. The book Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press) is much recommended to you to learn. You can also get the e-book through the official web site, so you can more readily to read the book.

Amy Smith:

Beside this Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press) in your phone, it might give you a way to get more close to the new knowledge or details. The information and the knowledge you may got here is fresh through the oven so don't always be worry if you feel like an older people live in narrow small town. It is good thing to have Vision: A Computational Investigation into the Human Representation and Processing of Visual Information (MIT Press) because this book offers for you readable information. Do you at times have book but you seldom get what it's exactly about. Oh come on, that wil happen if you have this in the hand. The Enjoyable blend here

cannot be questionable, just like treasuring beautiful island. So do you still want to miss this? Find this book and also read it from today!
