Downstream Industrial Biotechnology: Recovery and Purification

Downstream Industrial Biotechnology: Recovery and Purification

An affordable, easily accessible desk reference on biomanufacturing, focused on downstream recovery and purification

Advances in the fundamental knowledge surrounding biotechnology, novel materials, and advanced engineering approaches continue to be translated into bioprocesses that bring new products to market at a significantly faster pace than most other industries. Industrial scale biotechnology and new manufacturing methods are revolutionizing medicine, environmental monitoring and remediation, consumer products, food production, agriculture, and forestry, and continue to be a major area of research.

The downstream stage in industrial biotechnology refers to recovery, isolation, and purification of the microbial products from cell debris, processing medium and contaminating biomolecules from the upstream process into a finished product such as biopharmaceuticals and vaccines.

Downstream process design has the greatest impact on overall biomanufacturing cost because not only does the biochemistry of different products (e.g., peptides, proteins, hormones, antibiotics, and complex antigens) dictate different methods for the isolation and purification of these products, but contaminating byproducts can also reduce overall process yield, and may have serious consequences on clinical safety and efficacy. Therefore downstream separation scientists and engineers are continually seeking to eliminate, or combine, unit operations to minimize the number of process steps in order to maximize product recovery at a specified concentration and purity.

Based on Wiley's *Encyclopedia of Industrial Biotechnology: Bioprocess, Bioseparation, and Cell Technology*, this volume features fifty articles that provide information on downstream recovery of cells and protein capture; process development and facility design; equipment; PAT in downstream processes; downstream cGMP operations; and regulatory compliance.

It covers:

- Cell wall disruption and lysis
- Cell recovery by centrifugation and filtration
- Large-scale protein chromatography
- Scale down of biopharmaceutical purification operations
- Lipopolysaccharide removal
- Porous media in biotechnology
- Equipment used in industrial protein purification
- Affinity chromatography
- Antibody purification, monoclonal and polyclonal
- Protein aggregation, precipitation and crystallization
- Freeze-drying of biopharmaceuticals
- Biopharmaceutical facility design and validation
- Pharmaceutical bioburden testing
- Regulatory requirements

Ideal for graduate and advanced undergraduate courses on biomanufacturing, biochemical engineering, biopharmaceutical facility design, biochemistry, industrial microbiology, gene expression technology, and cell culture technology, *Downstream Industrial Biotechnology* is also a highly recommended resource for industry professionals and libraries.

From reader reviews:

Terry Kiser:

Why don't make it to be your habit? Right now, try to prepare your time to do the important action, like looking for your favorite book and reading a guide. Beside you can solve your condition; you can add your knowledge by the book entitled Downstream Industrial Biotechnology: Recovery and Purification. Try to stumble through book Downstream Industrial Biotechnology: Recovery and Purification as your pal. It means that it can to get your friend when you feel alone and beside that of course make you smarter than before. Yeah, it is very fortunated to suit your needs. The book makes you far more confidence because you can know almost everything by the book. So , let's make new experience in addition to knowledge with this book.

Sonia Cote:

The book Downstream Industrial Biotechnology: Recovery and Purification can give more knowledge and information about everything you want. Why must we leave a very important thing like a book Downstream Industrial Biotechnology: Recovery and Purification? A few of you have a different opinion about book. But one aim which book can give many info for us. It is absolutely correct. Right now, try to closer along with your book. Knowledge or info that you take for that, you can give for each other; you are able to share all of these. Book Downstream Industrial Biotechnology: Recovery and Purification has simple shape however, you know: it has great and massive function for you. You can seem the enormous world by open and read a e-book. So it is very wonderful.

James Fox:

Downstream Industrial Biotechnology: Recovery and Purification can be one of your beginner books that are good idea. Many of us recommend that straight away because this publication has good vocabulary that will increase your knowledge in terminology, easy to understand, bit entertaining but delivering the information. The author giving his/her effort that will put every word into enjoyment arrangement in writing Downstream Industrial Biotechnology: Recovery and Purification but doesn't forget the main place, giving the reader the hottest along with based confirm resource information that maybe you can be considered one of it. This great information could draw you into completely new stage of crucial contemplating.

Debbie Gray:

Publication is one of source of understanding. We can add our understanding from it. Not only for students but additionally native or citizen require book to know the revise information of year for you to year. As we know those ebooks have many advantages. Beside many of us add our knowledge, also can bring us to around the world. Through the book Downstream Industrial Biotechnology: Recovery and Purification we can take more advantage. Don't you to definitely be creative people? For being creative person must choose to read a book. Simply choose the best book that appropriate with your aim. Don't always be doubt to change your life at this book Downstream Industrial Biotechnology: Recovery and Purification. You can more

attractive than now.
