## **Forest Monitoring: Chapter 24. Reporting Forest Monitoring (Developments in Environmental Science)** Andy J. Moffat, Richard Fischer

The importance of translating the results of forest monitoring into useful commodities (i.e., data, information, knowledge, and wisdom) is discussed. The need for an effective communications strategy is stressed, following well-established reporting principles. Reporting may involve a range of communications specialists as well as those who collect the data, and scientists who analyze and interpret it. It is vital that the type of report is tailored to the needs of particular audiences, be they scientists or modelers, policy and/or decision makers. Monitoring platforms need to be increasingly aware of new opportunities for the data and information they generate. The internet is now enabling quicker and global reporting of monitoring outputs but also promoting two-way communication between user and consumer. A political movement to promote open access to all forms of monitoring data is gaining ground and some international and European regulations are already affecting the way forest monitoring outputs are placed in the public domain.
