Gérard Said

Peripheral Nerve Disorders: Chapter 27. Sarcoidosis of the peripheral nervous system (Handbook of Clinical Neurology) Gérard Said

Neurological manifestations of sarcoidosis are relatively rare but constitute a treatable cause of central and peripheral neurological manifestations. Regarding the peripheral nervous system, cranial nerves are predominantly affected, and peripheral facial nerve palsy, often bilateral, is the most common neurological manifestation of sarcoidosis. Multifocal peripheral neuropathy is a rare event in sarcoidosis. In some cases, however, peripheral neuropathy is the presenting manifestation and seemingly the only organ affected. Definite diagnosis of sarcoidosis rests ideally on histological demonstration of sarcoid granulomas in tissue biopsy specimens.
