Statistical Analysis in Microbiology: StatNotes

Richard A. Armstrong, Anthony C. Hilton

Statistical Analysis in Microbiology: StatNotes Richard A. Armstrong, Anthony C. Hilton

This book is aimed primarily at microbiologists who are undertaking research, and who require a basic knowledge of statistics to analyse their experimental data. Computer software employing a wide range of data analysis methods is widely available to experimental scientists. The availability of this software, however, makes it even more essential that microbiologists understand the basic principles of statistics.

Statistical analysis of data can be complex with many different methods of approach, each of which applies in a particular experimental circumstance. In addition, most statistical software commercially available is complex and difficult to use. Hence, it is easy to apply an incorrect statistical method to data and to draw the wrong conclusions from an experiment.

The purpose of this book is an attempt to present the basic logic of statistics as clearly as possible and therefore, to dispel some of the myths that often surround the subject. The book is presented as a series of 'Statnotes', many of which were originally published in the 'Microbiologist' by the Society for Applied Microbiology, each of which deals with various topics including the nature of variables, comparing the means of two or more groups, non-parametric statistics, analysis of variance, correlating variables, and more complex methods such as multiple linear regression and factor analysis. In each case, the relevant statistical methods are illustrated with scenarios and real experimental data drawn from experiments in microbiology. The text will incorporate a glossary of the most commonly used statistical terms and a section to aid the investigator to select the most appropriate test.

From reader reviews:

Michael Cardona:

Have you spare time for a day? What do you do when you have much more or little spare time? Yes, you can choose the suitable activity with regard to spend your time. Any person spent all their spare time to take a walk, shopping, or went to often the Mall. How about open or even read a book allowed Statistical Analysis in Microbiology: StatNotes? Maybe it is being best activity for you. You know beside you can spend your time together with your favorite's book, you can cleverer than before. Do you agree with it is opinion or you have various other opinion?

Jenni Roberts:

The book Statistical Analysis in Microbiology: StatNotes can give more knowledge and information about everything you want. Exactly why must we leave a good thing like a book Statistical Analysis in Microbiology: StatNotes? Some of you have a different opinion about book. But one aim which book can give many info for us. It is absolutely suitable. Right now, try to closer along with your book. Knowledge or data that you take for that, you could give for each other; you could share all of these. Book Statistical Analysis in Microbiology: StatNotes has simple shape but the truth is know: it has great and big function for you. You can look the enormous world by start and read a publication. So it is very wonderful.

Jennifer Ruiz:

Nowadays reading books become more and more than want or need but also get a life style. This reading addiction give you lot of advantages. The advantages you got of course the knowledge the actual information inside the book that will improve your knowledge and information. The information you get based on what kind of e-book you read, if you want send more knowledge just go with training books but if you want experience happy read one together with theme for entertaining such as comic or novel. Often the Statistical Analysis in Microbiology: StatNotes is kind of e-book which is giving the reader unstable experience.

Kent Dennis:

Reading a book being new life style in this season; every people loves to read a book. When you go through a book you can get a great deal of benefit. When you read books, you can improve your knowledge, because book has a lot of information onto it. The information that you will get depend on what sorts of book that you have read. If you wish to get information about your study, you can read education books, but if you want to entertain yourself look for a fiction books, such us novel, comics, along with soon. The Statistical Analysis in Microbiology: StatNotes will give you new experience in examining a book.
