Reef Fish Spawning Aggregations: Biology, Research and Management: 35 (Fish & Fisheries Series)

Reef fish spawning aggregations, ranging from small groups to many tens of thousands of individuals, are spectacular but poorly known natural phenomena whereby fish assemble at specific times and locations to spawn. For some species these large groups may be the only form of reproduction, the high fish numbers briefly giving a false impression of stability and abundance—an ‘illusion of plenty’. They are often a focus for intensive seasonal fishing because of their predictability and because many important commercial fishes form them. Highly vulnerable to overexploitation, many aggregations and their associated fisheries, have disappeared or are in decline. Few are effectively managed or incorporated into protected areas.

Aggregations are not well understood by fishery scientists, managers and conservationists and their significance little appreciated by fishers or the wider public. To ensure their persistence to replenish important fisheries in coral ecosystems, maintain their ecosystem function and continue to delight divers, a significant change in perspective is needed to foster protection and management.

This book provides comprehensive and practical coverage of the biology, study and management of reef fish aggregations, exploring their how, when, where, and why. It explores ways to better protect, study, manage and conserve them, while identifying key data gaps and questions. The text is extensively illustrated with many unique, never before published, photographs and graphics. Case studies on over 20 interesting and important fishes are included, outlining their biology and fisheries and highlighting major concerns and challenges.

From reader reviews:

Don Gonzales:

As people who live in typically the modest era should be update about what going on or info even knowledge to make these people keep up with the era which can be always change and make progress. Some of you maybe can update themselves by reading books. It is a good choice for you but the problems coming to a person is you don't know what one you should start with. This Reef Fish Spawning Aggregations: Biology, Research and Management: 35 (Fish & Fisheries Series) is our recommendation to help you keep up with the world. Why, since this book serves what you want and want in this era.

Lisa Rice:

Reading a book to be new life style in this yr; every people loves to study a book. When you read a book you can get a lot of benefit. When you read ebooks, you can improve your knowledge, mainly because book has a lot of information on it. The information that you will get depend on what types of book that you have read. In order to get information about your review, you can read education books, but if you want to entertain yourself you are able to a fiction books, these us novel, comics, in addition to soon. The Reef Fish Spawning Aggregations: Biology, Research and Management: 35 (Fish & Fisheries Series) provide you with a new experience in looking at a book.

Jesse Fox:

That guide can make you to feel relax. This book Reef Fish Spawning Aggregations: Biology, Research and Management: 35 (Fish & Fisheries Series) was colourful and of course has pictures on there. As we know that book Reef Fish Spawning Aggregations: Biology, Research and Management: 35 (Fish & Fisheries Series) has many kinds or genre. Start from kids until young adults. For example Naruto or Investigator Conan you can read and believe you are the character on there. Therefore not at all of book tend to be make you bored, any it offers up you feel happy, fun and relax. Try to choose the best book to suit your needs and try to like reading this.

Yolanda Nitta:

Reading a publication make you to get more knowledge as a result. You can take knowledge and information from the book. Book is composed or printed or outlined from each source in which filled update of news. Within this modern era like now, many ways to get information are available for an individual. From media social like newspaper, magazines, science reserve, encyclopedia, reference book, new and comic. You can add your knowledge by that book. Isn't it time to spend your spare time to spread out your book? Or just in search of the Reef Fish Spawning Aggregations: Biology, Research and Management: 35 (Fish & Fisheries Series) when you necessary it?
